

## Project Initialization and Planning Phase

|                      |                                  |
|----------------------|----------------------------------|
| <b>Date</b>          | 12 August,2026                   |
| <b>Team ID</b>       | Individual                       |
| <b>Project Name</b>  | AI Knowledge Retention Predictor |
| <b>Maximum Marks</b> | 3 Marks                          |

### Define Problem Statements (Customer Problem Statement Template)

| <b>Problem Statement (PS)</b> | <b>I am (Customer )</b>                                              | <b>I'm trying to</b>                                                                     | <b>But</b>                                                                                | <b>Because</b>                                                                              | <b>Which makes me feel</b>                                          |
|-------------------------------|----------------------------------------------------------------------|------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------|---------------------------------------------------------------------|
| <b>PS-1</b>                   | A student preparing for competitive exams or university coursework . | Retain complex technical concepts (e.g., Data Structures, Algorithms) over a long period | I forget key concepts rapidly within a few days of studying.                              | I rely on passive re-reading and lack a data-driven revision schedule to beat memory decay. | Anxious and overwhelmed during exam preparation .                   |
| <b>PS-2</b>                   | A self-paced learner studying specialized topics independently.      | Identify exact weak areas and target them with active recall practice.                   | Standard static quizzes don't adapt to my specific forgetting curve or difficulty levels. | Manual tracking of review intervals is tedious and inefficient.                             | Frustrated by inefficient study habits and wasted preparation time. |
